STREET CLOSING RESCHEDULED TO WEEKEND OF APRIL 26 & 27

Demolition activity at the former Johns Manville site which will close Bridge Street for two days has been rescheduled to April 26 and 27. To allow for the demolition of the front wall of the 40 Bridge Street building, the road will be closed between Bancroft and Amory Street.

The team overseeing the demolition of the asbestos manufacturing facility includes representatives from Nashua Fire Safety, Nashua Environmental Health Dept, state health and environmental agencies and the U.S. Environmental Protection Agency. Team members incorporated the street closure into the demolition plan to ensure the continued safety of residents. A weekend was chosen to minimize the disruption to the estimated 24,000 cars which travel the road daily.

The demolition schedule has been accelerated to meet the goal of completing site cleanup by June 28. On-scene coordinator Paul Groulx is planning on "green grass in July."

The cooperation of neighborhood residents and businesses in this effort is greatly appreciated. ♦

REMOVAL ACTIVITY TO INCREASE

More than 15,000 tons of asbestos-containing material and 550 tons of steel have already been removed from the Johns Manville site. During the final months of cleanup work, many more tons of debris will be transported off-site. It will be more common for trucks to be entering and leaving the site from Sanders Street. Drivers and pedestrians should be extra alert as you travel along Bridge St. ♦

FENCE CHANGES REQUIRE CAUTION

In order to allow for moving heavy equipment on and off-site during the next phase of site work, some of the fencing around the site will be moved. Residents are asked to keep a safe distance from the site. It is still an active demolition site and contains hazardous areas. ♦

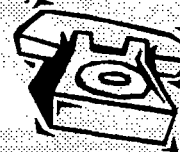

HAVE A COMMENT OR QUESTION?

If you have a questions or problem, please call a member of the Johns-Manville Demolition Project Team.
